This family of homologous proteins was identified by an 'all-versus-all' BLAST procedure using all Caenorhabditis elegans proteins in the compared to the Drosophila melanogaster Flybase database, and conn-annotated protein clusters, conserved in both C. elegans and D. melanogaster, were used in a BLAST procedure against the Celera Human Genome Database, and Protein Cluster I proteins of unknown function were selected for study. The human part of Protein Cluster I comprises polypeptides encoded by 3 genes. The partial gene sequence encoding the present polypeptide is expressed primarily in the nervous system and digestive system. The claimed to be useful for differential identification of the tissue(s) or cell type(s) present in a biological sample, for diagnosis of diseases and disorders, including metabolic disorders and immune diseates useful in the treatment of such diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Ma

                                                                                                                                                                                                                                                                                                              The present invention relates to novel human ORFX polypeptides and their coding sequences (ABP63631-ABP64681 and ABQ98194-ABQ99267). The sequences were discovered in human atherogenic cells, in particular in platelets and human umbilical vein endothelial cells (HUVEC) and are expressed in many other tissues as well. Atherogenic cells are cells which have the potential to develop atherosclerotic plaques. The ORFX polypeptides and nucleic acids are useful for treating or preventing a pathological condition associated with an ORFX-associated disorder, e.g. cancer, cardiovascular disease, allergy, autoimmune disease, wound healing, blood coagulation disorders or inflammatory disorders.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20020082206.
                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 10;

CC ABL39691 to ABL39818 represent novel human nucleic acid sequences encoding the proteins given in ABB06037 to ABB06164. The novel sequences (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, antirheumatic, antiarthritic, antipsoriatic, ophthalmological, virucide, vasotropic, antiarteriosclerotic, antiinflammatory, dermatological, cardiovascular, anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, cardicer, antidepressant, gastrointestinal, aeuroleptic, tranquilliser, antiulcer, antidepressant, gastrointestinal, aeuroleptic, cerebroprotective, nootropic and contraceptive activities. The NS can be used in vaccines, gene therapy and antisense therapy. Nucleic acids, expression vectors and ciagnosing e.g. cancer, osteoporosis, endometriosis, degenerative diseases, dystonia, multiple sclerosis, rheumatoid arthritis, psoriasis, cataracts, restenosis, atherosclerosis, inflammation, skin disorders, glaucoma, obesity, muscular dystrophy, AIDS, infertility, cardiovascular disease, epilepsy, angina, neurodegeneration, diabetes, anxiety, depression, schizophrenia, viral disease, gastric ulcers, stroke, CAlzheimer's disease and as a contracentive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   W Human; cytostatic; osteopathic; gynaecological; neuroprotective;

                                                                                             The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ota T, Ni

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAM39967
The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, C which represent the human ORFX open reading frames 1 to 3161. The ORFX C sequences have activities such as: cytostatic; hepatotropic; vulnerary; C antipsoriatic; antiparkinsonian; nootropic; neuroprotective; C antipsoriatic; antiparkinsonian; nootropic; neuroprotective; C antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; C antidiabetic; hypotensive; dermatological; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating C pathological conditions associated with an ORFX-associated disorder. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, C proliferative disorders, neurodegenerative disorders, osteoarthritis, C profiferation, hypothyroidism, cholesterol ester storage, systemic lupus carterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coagulation; to inhibit thrombosis; and as a contraceptive.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating conciders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.

                                                                                                                       The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tang

                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the protein sequence of a human protein, named ADPI-41, which is differentially expressed (present in reduced amounts) in all areas of the brain tested except the amygdala in Alzheimer's disease (AD). ADPI-41 has an apparent the mol.wt. of 32806 and pI of 9.84. It is useful as a marker and/or the thirt of sideroflexin 1 (Sxfn1), recently identified in the mouse model of sideroblastic anaemia. This is the first demonstration of the human Sxfn protein and the first indication that it may be associated with the occurrence of AD. ADPI-41 undergoes (see ABB79573). The invention provides ADPI-41 undergoes (see ABB79573). The invention provides ADPI-41 polypeptides and polynucleotides, vectors, host cells and antibodies. A claimed method of screening for and/or diagnosis of a neuropsychiatric or neurological disorder in a subject and/or monitoring the cffectiveness of therapy comprises detecting and/or quantifying the amount of ADPI-41 polypeptide and/or nucleic acid molecule in a subject. A claimed method for the prophylaxis and/or treatment of a neuropsychiatric disorder or neurological disorder comprises administering an ADPI-41 polypeptide or nucleic acid. A method of screening for agents that modulate ADPI-41 cacid. A method of screening for agents that modulate ADPI-41 cacid. A method of screening for agents that modulate ADPI-41 cand dementia, schizophrenia, Parkinson's disease, multiple sclerosis, and dementia, schizophrenia, Parkinson's disease, multiple sclerosis,

                                                                                                                                                                  The present invention relates to methods and compositions for the screening, diagnosis or prognosis of Alzheimer's disease (AD) in a subject. The method comprises analysing a sample of brain tissue from a subject by 2D electrophoresis to generate a 2D array of Alzheimer's disease-associated features (ADFs), whose relative abundance correlates with the presence, absence, stage or severity of AD and comparing the abundance of each feature with the abundance of invention also describes Alzheimer's disease-associated protein compositions of the invention are useful for the screening, diagnosis or prognosis of AD in a subject, for determining the stage or severity of AD in a subject, for identifying a subject at risk of developing AD, or for monitoring the effect of therapy administered to a subject thaving AD. Antibodies capable of binding to ADPIs are useful for treatment regime. An agent that modulates the activity of ADPI is useful in the manufacture of a medicament for the treatment or prevention of AD in a subject. The present sequence represents human appert that modulates the activity of ADPI is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                         The present invention relates to the identification of a human gene family (see ABN83754-57) encoding a group of polypeptides (see ABB76445-48) referred to as Protein Cluster I. This family of homologous proteins was identified by an 'all-versus-all' BLAST procedure using all Caenorhabditis elegans proteins in the Compared to the Drosophila melanogaster Plybase database, and mon-annotated protein clusters, conserved in both C. elegans and D. melanogaster, were used in a BLAST procedure against the Celera Human Genome Database, and Protein Cluster I proteins of unknown Cluster I comprises polypeptides encoded by 3 genes. The gene encoding the present polypeptide is expressed primarily in the identification of the tissue(s) or cell type(s) present in a biological sample, for diagnosis of diseases and disorders, especially cobesity and diabetes, and for identifying agents useful in the treatment of such disorders and immune disorders, especially

The invention relates to human transporters and ion channels (TRICH)
and the polynucleotides encoding them. The composition comprising TRICH
or agonist of TRICH is useful for treating a disease or condition
composition associated with decreased expression of functional TRICH or condition
comprising Ab is useful for diagnosing a condition of disease associated
with expression of TRICH in a subject, where the disorders include a
transport disorder such as akinesia, cystic fibrosis, diabetes mellitus,
Parkinson's disease, myasthenia gravis, cardiac disorders associated
with transport e.g. angina, hypertension, myocarditis, neurological
disorders associated with transport e.g. Alzheimer's disease, Wilson's
disease, schizophrenia, cataracts, infertility, hyperglycaemia, Grave's
disease, goitre, addison's disease, Huntington's disease, dementia,
multiple sclerosis, bacterial and viral meningitis. TRICH DNA is useful
for generating a transcript image of a tissue or cell type, which
represents the global pattern of gene expression by a particular tissue
or cell type and for analysing the proteome of a tissue or cell type.
TRICH DNA is used in gene therapy. The present amino acid sequence is
                                                  ll type
DNA is
TRICH3

                                                                                                                                                                                                                                                                                                         AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; anticonvulsant; nootropic; newroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressant; cantidiabetic; hypotensive; dermatological; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, coagulation; to inhibit thrombosis; and as a contraceptive.

                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                Novel such a

T27337
hypothetical protein Y6E2A.9 - Caenorhabd
C; Species: Caenorhabditis elegans
C; Date: 15-Oct-1999 #sequence_revision 15
C; Accession: T27337
R; Matthews, L.
submitted to the EMBL Data Library, Janua
A; Reference number: Z20347
A; Accession: T27337
A; Status: preliminary; translated from GB
A; Molecule type: DNA
A; Residues: 1-329 <WILL>
A; Cross-references: EMBL: AL021175; PIDN: C
